

Are you looking to build a concrete footing and floor for your shed or garage?

If you are looking to build a footing and floor for your detached garage or shed, typical foundation depths in your area are not required if:

- The building is not of masonry or masonry veneer construction
- The building is not more than 1 storey in height
- The building is a detached accessory building

The GEO-Pad System by Legalett provides the necessary materials to build a foundation for detached garages and sheds - the customer need only provide steel, concrete and labour. It provides time and cost savings by eliminating digging for deep footings and providing an easy level surface to construct the foundation on for the average homeowner. Never has foundation installation been so simple.

This is a simple shallow floating foundation only - larger GEO-Slabs, heated slabs and FROSTSHIELD frost protection are also available through your local Legalett representative. Please visit www.legalett.com for more information and to find a retailer or Sales Agent near you.
