

### Sam Jake's Inn

This 1,856 sq.ft. LEGALETT foundation supports a warm and comfortable meeting/conference room adjoined to an inn. The addition of the meeting room was made very simple by LEGALETT, since installing a LEGALETT system did not require that the existing foundation of the very old inn be disturbed in any way. The addition of the meeting room was as simple as strip the topsoil, lay a bed of gravel, assemble the LEGALETT heating system, and pour.

One heating zone was used on this open concept heated room. Since windows were small, and the exterior envelope well insulated, the energy efficient concept of LEGALETT was carried through to the rest of the building, resulting in dramatically low heating bills for such a comfortable, quiet, and pleasant meeting area.
