

This energy efficient home uses solid insulation panels installed within the 2”x 6” framing, which provides an R-value of 32 in the walls, while the flat and cathedral ceilings are designed with R50 values. The thermal windows are filled with argon helping to retain the heat provided by the state of the art Legalett “Slab on Grade” air-heated radiant floor heating system.

The mechanical aspect consists of one Legalett electric coil heater with four independent zones, each controlled by means of programmable thermostat.

Long term benefits of choosing the Legalett system:

- Lower heating costs, compared to conventional forced-air systems
- Comfortable warm floors and moisture-free indoor air quality
- Minimal impact on the Environment

Location: **New Minas, Nova Scotia**

Sales Rep: **Bill Lyons**

Builder: **Bill Lyons**

Heated “Slab on Grade” Area: **1,784 sq. ft.**

Garage heated below 15° C Area ... **309 sq. ft.**

Total Heated Area 2,093 sq. ft.
