

This larger three bedroom home layout was designed to include a walk-out basement allowing the homeowners to take advantage of it's magnificent views of the Ottawa River. The Legalett air-heated "Slab on Grade" system was the perfect solution for heating this typically cooler section of the home even though the area has a dedicated cold storage area.

The mechanical aspect consists of two Legalett water coil heaters, each controlling four independent zones by means of programmable thermostats.

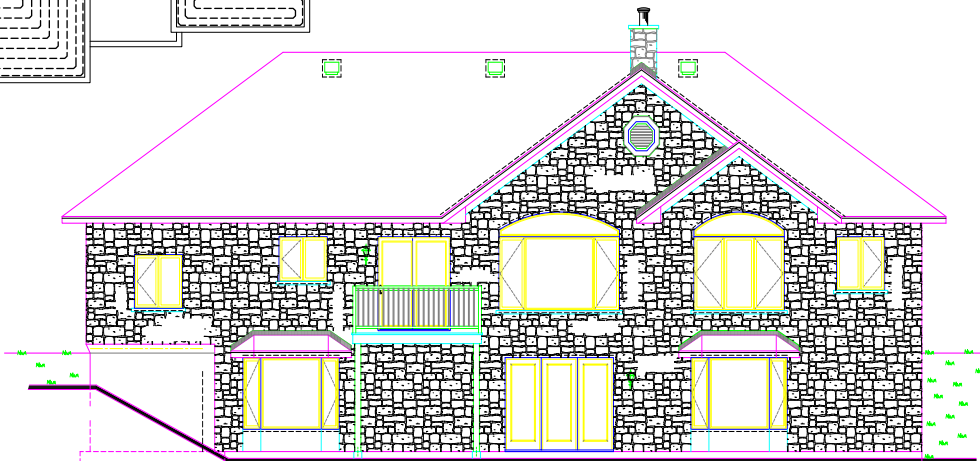

Long term benefits of choosing the Legalett system:

- Lower heating costs, compared to conventional forced-air systems
- comfortable warm floors and moisture-free indoor air quality
- Minimal impact on the Environment
