

The owners of this one level home wanted to build a slab on grade home that was energy efficient and cost effective. The owners say this home is extremely comfortable and great for their kids as they are always playing on the floor. They have also experienced lower energy costs than in their former residence. This home and garage was built using 5" Air-Heated GEO-Slab with two water coil heaters with a total of four independent zones with programmable thermostats.

Location: ... **Thessalon, ON**
